1. Introduction and overview

Legal Status and activities

Habib Bank Limited - UAE Branches operates as a branch of Habib Bank Limited with its Head Office ("Head Office") in Pakistan. In the United Arab Emirates ("UAE"), it operates through its five branches (2023: six branches) located in the emirates of Abu Dhabi, Dubai and Sharjah under a license issued by the Central Bank of the UAE ("UAE Central Bank"). Habib Bank Limited is listed on the Pakistan Stock Exchange.

The principal activities of Habib Bank Limited - UAE Branches (hereafter these branches are referred to as the "Bank") are to provide retail and corporate banking services in the UAE. The registered address of the Bank is P.O. Box 888, Dubai, UAE.

Purpose and basis of preparation

The Bank is regulated by the Central Bank of the United Arab Emirates ("CBUAE") and follows the Pillar III disclosure requirement guidelines issued by the CBUAE. In February 2017, Basel III capital regulations issued by CBUAE came into effect for all Banks in the UAE. Additional guidelines for Basel III were issued over the course of 2019/2020 in consultations with the UAE Banks.

This document presents Pillar III disclosures in line with CBUAE guidance which complements the Basel III minimum capital requirements and the supervisory review process of the Bank. These disclosures have been prepared in line with the disclosure templates introduced by the CBUAE guidelines on disclosure requirements (CBUAE/BSN/2020/4980, CBUAE CBUAE/BSN/2021/5508 and CBUAE/BSN/2022/1887) published in November 2020, November 2021 and May 2022 respectively.

1.1 Applicability of Pillar III disclosure templates

Below is the list of the CBUAE prescribed Pillar III disclosure templates which are not mandatory / applicable to the Bank and have not been included in this document.

Topic	Table	Information Overview
Prudential valuation adjustments	PV1	Prudent valuation adjustments
Leverage ratio	LR1	Summary comparison of accounting assets vs leverage ratio exposure measure (January 2014 standard)
Liquidity	LIQ1	Liquidity Coverage Ratio
	LIQ2	Net Stable Funding Ratio
Credit risk	CRC	Qualitative information on the mitigation of credit risk
	CR3	Credit risk mitigation techniques - overview
	CRD	Qualitative disclosures on banks' use of external credit ratings under the standardised approach for credit risk
Counterparty credit risk (CCR)	CCRA	Qualitative disclosure related to CCR
	CCR1	Analysis of CCR by approach
	CCR2	Credit valuation adjustment capital charge
	CCR3	Standardised approach - CCR exposures by regulatory portfolio and risk weights
	CCR5	Composition of collateral for CCR exposure
	CCR6	Credit derivatives exposures
	CCR8	Exposures to central counterparties
Securitisation	SECA	Qualitative disclosures related to securitisation exposures
	SEC1	Securitisation exposures in the banking book
	SEC2	Securitisation exposures in the trading book
	SEC3	Securitisation exposures in the banking book and associated regulatory capital requirements - bank acting as originator or as sponsor
Remuneration Policy	SEC4	Securitisation exposures in the trading book and associated capital requirements - bank acting as investor
	REM2	Special payments
	REM3	Deferred remuneration

2. Overview of Risk Management and RWA

2.1 Key metrics (KM1)

		AED in '000				
		Dec 31, 2024	Sep 30, 2024	Jun 30, 2024	Mar 31, 2024	Dec 31, 2023
Available capital (amounts)						
1	Common Equity Tier 1 (CET1)	329,143	320,037	304,074	281,179	280,986
1a	Fully loaded ECL accounting model	327,181	318,525	302,562	279,667	279,002
2	Tier 1	329,143	320,037	304,074	281,179	280,986
2a	Fully loaded ECL accounting model Tier 1	327,181	318,525	302,562	279,667	279,002
3	Total capital	353,456	343,231	326,352	301,998	301,600
3a	Fully loaded ECL accounting model total capital	351,494	341,719	324,840	300,486	299,616
Risk-weighted assets (amounts)						
4	Total risk-weighted assets (RWA)	2,187,471	2,004,271	1,928,601	1,811,408	1,798,571
Risk-based capital ratios as a percentage of RWA						
5	Common Equity Tier 1 ratio (%)	15.05%	15.97%	15.77%	15.52%	15.62%
5a	Fully loaded ECL accounting model CET1 (%)	14.96%	15.89%	15.69%	15.44%	15.51%
6	Tier 1 ratio (%)	15.05%	15.97%	15.77%	15.52%	15.62%
6a	Fully loaded ECL accounting model Tier 1 ratio (%)	14.96%	15.89%	15.69%	15.44%	15.51%
7	Total capital ratio (%)	16.16%	17.12%	16.92%	16.67%	16.77%
7a	Fully loaded ECL accounting model total capital ratio (%)	16.07%	17.05%	16.84%	16.59%	16.66%
Additional CET1 buffer requirements as a percentage of RWA						
8	Capital conservation buffer requirement (2.5% from 2019) (%)	2.50%	2.50%	2.50%	2.50%	2.50%
9	Countercyclical buffer requirement (%)	0.03%	0.03%	0.01%	0.02%	0.01%
10	Bank D-SIB additional requirements (%)	0.00%	0.00%	0.00%	0.00%	0.00%
11	Total of bank CET1 specific buffer requirements (%) (row 8 + row 9+ row 10)	2.53%	2.53%	2.51%	2.52%	2.51%
12	CET1 available after meeting the bank's minimum capital requirements (%)	5.66%	6.62%	6.42%	6.17%	6.27%
Leverage Ratio						
13	Total leverage ratio measure	3,477,576	3,483,700	3,623,713	3,467,803	2,883,783
14	Leverage ratio (%) (row 2/row 13)	9.46%	9.19%	8.39%	8.11%	9.74%
14a	Fully loaded ECL accounting model leverage ratio (%) (row 2A/row 13)	9.41%	9.14%	8.35%	8.06%	9.67%
14b	Leverage ratio (%) (excluding the impact of any applicable temporary exemption of central bank reserves)	9.46%	9.19%	8.39%	8.11%	9.74%
Liquidity Coverage Ratio *						
15	Total HQLA					
16	Total net cash outflow					
17	LCR ratio (%)					
Net Stable Funding Ratio *						
18	Total available stable funding					
19	Total required stable funding					
20	NSFR ratio (%)					
ELAR						
21	Total HQLA	1,182,408	1,265,941	1,530,292	1,579,658	1,219,543
22	Total liabilities	2,916,086	2,973,808	3,100,844	2,942,358	2,533,906
23	Eligible Liquid Assets Ratio (ELAR) (%)	40.55%	42.57%	49.35%	53.69%	48.13%
ASRR						
24	Total available stable funding	2,779,906	2,850,276	2,973,297	2,723,681	2,397,946
25	Total Advances	1,518,638	1,383,889	1,301,063	1,016,704	1,077,266
26	Advances to Stable Resources Ratio (%)	54.63%	48.55%	43.76%	37.33%	44.92%

*As per CBUAE regulations, Liquidity Coverage Ratio and Net Stable Funding Ratio are not applicable on the bank being a branch of a foreign bank. The bank uses Eligible Liquid Asset Ratio (ELAR) and Lending to Stable Resources Ratio (LSRR) as an alternate.

The Bank's capital ratio remains strong at 16.16% compared to minimum regulatory requirement of 13%, hence providing sufficient buffer to grow the balance sheet.

The Bank comfortably remains above the minimum 3% under leverage ratio requirements. Liquidity ratios (ELAR and ASRR) also remain well-buffered.

2.2 Bank risk management approach (OVA)

Business and Overall Risk Profile

Habib Bank Limited UAE (hereafter “HBL-UAE” or ‘the Bank’), foreign branch of Habib Bank Limited Pakistan (hereafter “HBL”), principal revenue stream is generated through wholesale banking model in addition to other products offer by the Bank to the customer. The Bank also offers traditional deposit products to the customers, which are mainly used to finance the asset book. The bank also considers deploying liquidity in FI which are low risk assets, in fixed income securities and other treasury products to generate revenues and maintain a balanced risk profile.

The primary risks to the Bank arise from extending credit to corporate and institutional banking. While carrying the business, the Bank is also exposed to a range of other risk types which includes market, operational, liquidity, compliance, reputational, country and legal risk. The Bank is proactively monitoring and enhancing the risk management strategies that drive the direction of its risk management processes, product range and risk diversification strategies.

Corporate and Risk Governance

HBL-UAE overall risk management responsibility resides with the Board of Directors (hereafter “the Board”, “BOD”) of Habib Bank Limited. The Board ensures effective risk governance, control and oversight of the Bank processes with the help of Board and management level committees at Head Office and through HBL-UAE management committees. Though, the Board remains the ultimate responsible for the domestic and foreign branch operations and the financial stability of the Bank.

In order to effectively discharge this responsibility, the Board is assisted by various Board Committees based on their respective Board approved ‘Term of Reference’ (TOR), namely Board Audit Committee (BAC), Board Risk Management Committee (BRMC), Board Human Resource and Remuneration Committee (BHRRC), Board IT Committee (BITC), Board Strategy Input and Monitoring Committee (BSIMC), Board Compliance and Conduct Committee (BCNC), Board Development Finance Committee (BDFC) and Board Nomination and Remuneration Committee (BNRC). These committees are supported by the management level committees formalized at Habib Bank Limited Pakistan which are also responsible to oversee the international operations and respective committees.

HBL-UAE management actively manages risk, primarily through the risk department with oversight by the Management Committee (MANCOM), Integrated Risk Management Committee (IRMC), Assets & Liabilities Committee (ALCO), Compliance Committee of Management (CCM), Information Technology Steering Committee (ITSC) and Branch Risk and Control Committee (BRCC). To ensure overall governance is in place, the Bank has formalized UAE Corporate Governance committee (UAEGC) which is chaired by Head of International Banking along with representations by senior management from head office.

Risk Management Function

The Bank has a well-developed and robust risk management framework in line with the Group Risk Management and HBL-UAE local regulatory requirement which is developed and implemented based on the local operations, size and complexity, and target market diversification. The Bank’s risk management framework is based on strong Board oversight, multi-tier management supervision, efficient systems, documented risk appetite, and clearly articulated policies and procedures.

The Board of Directors provides the strategic direction for effective risk management and ensures that a robust risk management framework is in place including the required human resources, policies, procedures and systems. It is supported in this task by the Board Risk Management Committee (BRMC) as well as by various management committees.

For effective implementation of the risk management framework, the Risk Management function, headed by the Chief Risk Officer (CRO), operates independently of business units within the HBL. Risk Management is responsible for the development and implementation of risk policies and for monitoring the risks associated with various activities of the Bank. The CRO reports to the President, with a functional reporting line to the BRMC.

CRO is responsible for ensuring effective functioning of Risk Management and implementation of ERM framework across the bank. CRO has been delegated by the BRMC to ensure development & implementation of risk policies, processes, tools and systems, in light of regulations and best market practice. Leading risk strategy and risk appetite framework of the bank, CRO remain responsible for active contribution in key decision-making processes of the bank.

To discharge the responsibility of effective risk management, CRO ensure strong, independent and dynamic risk management function with all required financial, system and physical resources.

For international operations, CRO has a dedicated direct report Head of International & FI Risk at HBL who remains responsible for risk management implementation across international locations of Habib Bank Limited.

The Risk Management function comprises of the following areas:

- Credit Policy & Analytics
- Credit Approvals
- Credit Administration
- Market & Liquidity Risk Management
- Enterprise Risk Management

The International and FI Risk covers UAE through a Credit Risk Manager and Head of Risk Management.

Head of Risk Management UAE monitors the overall risk profile and manages the risk function within the HBL-UAE branch in line with CBUAE requirement. The Credit Risk Manager is responsible for the management of the Credit Risk function, which includes review, approval and management of the credit risk portfolio and its exceptions and to ensure compliance with CBUAE regulations pertaining to Credit Risk. To maintain independence, Credit Risk Manager does not report into the Head of Risk Management UAE and has an independent reporting to Head Office Pakistan.

For all local HBL UAE requirements the deliverables are oversighted by Head Risk Management UAE and Head International & FI Risk. This structure enables the knowledge enrichment and broaden the understanding to consider the implementation of best market practices.

Risk Management Framework

The management of HBL UAE is committed to manage processes with effective risk management and compliance to ensure a viable balance sheet for long term. The Board of Directors has ultimate responsibility for setting HBL UAE risk appetite for ensuring risk is managed effectively. The Board and management foster a risk and compliance culture and follows the 'three line of defense' which ensure the segregation between risk owner, risk oversight and assurance role. Board have empowered all level employees to raise grievances, improper behavior by using whistle blowing mechanism and Operational risk incident reporting. Management is also flexible and promote suggestions to pursue the Bank's strategic goals. The management believes in transparency and acknowledgement of risk and accordingly take necessary action to ensure risk is timely mitigated and managed within the Bank's approved risk appetite.

Risk Management Framework is developed to ensure a comprehensive management of risk throughout the Bank, HBL employs a risk management framework that is applicable to all levels of the organization with strong Board oversight. A Risk Governance function is also in place at HBL, whose role is to formulate credit policies and procedures and provide oversight related to portfolio management and automation. The Bank has strong credit management practices that include regular Early Alert Committee meetings and rapid portfolio reviews to help ensure the strength and resilience of its credit portfolio. In order to further strengthen usage of internal credit risk rating framework, Obligor Risk Rating model implemented by the Bank has also been validated to ensure its efficiency and effectiveness.

Risk management systems continue to evolve to facilitate business growth whilst limiting the effect of any residual risks. Market and liquidity risk indicators are reviewed on a monthly basis by Asset Liability Committee (ALCO) of HBL UAE and Global ALCO Sub-Committee for Market & Liquidity Risk – Head Office. A comprehensive structure is in place to ensure that the Bank does not exceed its tolerance for market and liquidity risk. Policies and procedures are in place to govern operational risk management practices in a systematic and consistent manner. Key tools such as Risk & Control Self-Assessment/Integrated Risk and Control Repository, Key Risk Indicators and Operational Loss Data Management are used to gauge the likelihood and severity of operational risk incidents. The Bank's operational risk profile and fraud risk assessment are regularly shared with the senior management and the Board as and where deemed necessary.

The Enterprise Risk Management (ERM) process applies to all functions within HBL, ensuring a robust and consistent approach to risk management at all levels of the organization. HBL's ERM framework outlines the components, key principles and concepts of ERM; suggests a common risk language; and provides a clear direction and guidance for integrated risk management within the Bank. This is expected to bring synergies across the various risk management components and strengthen the risk identification, monitoring and controlling mechanism across HBL including

foreign branches. Within the ERM, a New Product Initiative Assessment process is implemented which comprehensively identify, assess and mitigate all risks within new products and services, to ensure that they are adequately addressed before launch.

Other risks are also managed by HBL under various explicit frameworks available which include but not limited to Anti-Money Laundering and Information Security risk.

For Basel reporting, the Bank has adopted the Standardized Approach for credit risk and the Basic Indicator Approach for operational risk. In addition, the Bank has adopted the simple approach for recognizing eligible collateral for credit risk mitigation. The Bank's goal is to develop resources internally to embed Basel related processes and methodologies in its risk practices. The Bank follows the Standardized Approach for market risk. The Bank has various other internal tools / MIS used for risk assessment and management reporting.

Stress Testing

Stress testing is an important tool of risk management and is considered an integral part of the Internal Capital Adequacy Assessment Process (ICAAP) under regulatory requirement. Stress testing is based on the concept of 'proportionality and complexity' and its applicability to the Bank. Relevant factors in this concept are size of the Bank, sophistication and diversification of its activities, materiality of different risk types and the Bank's vulnerability to them.

The Bank has developed various stress scenarios based on qualitative analysis and expert judgment. For stressing of risks that are driven by factors internal to the bank or risks that do not have any external/macro-economic dependency, appropriate parameters are used to define mild, medium and severe stress scenarios and a sensitivity approach is used to determine and quantify the level of risk based on fixed parameters. This included developing scenarios with a risk focus to determine how the particular scenario could disrupt the Banks performance and capital position. The risks and associated capital value are aggregated together without any diversification benefit being applied and the shock / parameter sensitivity is applied independently to each risk factor, based on a top down approach with some sensitivity analysis being conducted to determine the level of shock to be applied to each risk factor independently.

2.3 Overview of RWA (OV1)

The Risk Weighted Assets (RWAs) of the Bank witnessed an increase during 2024 as compared to last year due to increase in book size.

		AED '000		
		RWA		Minimum capital requirements
		Dec 31, 2024	Dec 31, 2023	Dec 31, 2024
1	Credit risk (excluding counterparty credit risk)	1,880,047	1,608,306	244,970
2	Of which: standardised approach (SA)	1,880,047	1,608,306	244,970
3	Of which: foundation internal ratings-based (F-IRB) approach	-	-	-
4	Of which: supervisory slotting approach	-	-	-
5	Of which: advanced internal ratings-based (A-IRB) approach	-	-	-
6	Counterparty credit risk (CCR)	64,961	40,821	8,464
7	Of which: standardised approach for counterparty credit risk	64,961	40,821	8,464
8	Of which: Internal Model Method (IMM)	-	-	-
9	Of which: other CCR	-	-	-
10	Credit valuation adjustment (CVA)	-	-	-

18	Of which: securitisation external ratings-based approach (SEC-ERBA)	-	-	-
19	Of which: securitisation standardised approach (SEC-SA)	-	-	-
20	Market risk	53,924	6,071	7,026
21	Of which: standardised approach (SA)	53,924	6,071	7,026
22	Of which: internal models approach (IMA)	-	-	-
23	Operational risk	188,539	143,373	24,567
24	Amounts below thresholds for deduction (subject to 250% risk weight)	6,108	5,566	-
25	Floor adjustment	-	-	-
26	Total (1+6+10+11+12+13+14+15+16+20+23)	2,187,471	1,798,571	285,027

3. Linkages between financial statements and regulatory exposures

3.1 Differences between accounting and regulatory scopes of consolidation and mapping of financial statement categories with regulatory risk categories (LI1)

Below table represents each assets and liability item on the Balance sheet along with relevant treatment under capital adequacy standards:

31 December 2024	AED '000						
	a	b	c	d	e	f	g
	Carrying values as reported in published financial statements	Carrying values under scope of regulatory consolidation	Carrying values of items:				
			Subject to credit risk framework	Subject to counterparty credit risk framework	Subject to the securitisation framework	Subject to market risk framework	Not subject to capital requirements or subject to deduction from capital
Assets							
Cash and balances with the UAE Central Bank ¹	579,692	579,692	579,692	-	-	-	-
Due from other banks ¹	59,846	59,846	59,846	-	-	-	-
Due from the Head Office and other branches ¹	41,628	41,628	41,628	-	-	-	-
Loans and advances - net ¹	1,501,699	1,501,699	1,501,699	-	-	-	-
Investment securities ¹	969,428	969,428	969,428	-	-	-	-
Customer acceptances ¹	31,117	31,117	31,117	-	-	-	-
Deferred tax asset ²	6,108	6,108	6,108	-	-	-	-
Other assets ¹	72,745	72,745	72,745	-	-	-	-
Property, equipment and intangibles ^{1 & 3}	10,789	8,953	8,953	-	-	-	1,836
Total Assets	3,273,052	3,271,216	3,271,216	-	-	-	1,836
Liabilities							
Due to other banks	3,065	3,065	-	-	-	-	3,065
Due to the Head Office and other branches	93,580	93,580	-	-	-	-	93,580
Customer deposits	2,691,874	2,691,874	-	-	-	-	2,691,874
Customer acceptances ⁴	31,117	31,117	-	-	-	-	31,117
Other liabilities	104,040	104,040	-	-	-	-	104,040
Total liabilities	2,923,676	2,923,676	-	-	-	-	2,923,676

¹ All are subject to credit risk framework

² Deferred tax asset on unused tax losses are deducted from capital. Remaining Deferred tax assets are subject to credit risk framework (subject to threshold deductions as per Basel framework).

³ Deducted from capital as per Basel framework

⁴ These are already covered under Credit RWA per assets breakdown above.

3.2 Main sources of differences between regulatory exposure amounts and carrying values (LI2)

The below table represents each asset, liability and off-balance sheet item on the Balance sheet along with relevant treatment under capital adequacy standards:

31 December 2024		AED '000				
		a	b	c	d	e
		Total	Items subject to:			
			Credit risk framework	Securitisation framework	Counterparty credit risk framework	Market risk framework
1	Asset carrying value amount under scope of regulatory consolidation (as per template LI1)	3,271,216	3,271,216	-	-	-
2	Liabilities carrying value amount under regulatory scope of consolidation (as per template LI1)	-	-	-	-	-
3	Total net amount under regulatory scope of consolidation	3,271,216	3,271,216	-	-	-
4	Off-balance sheet amounts	302,362	237,401	-	64,961	-
5	Differences in valuations	-	-	-	-	-
6	Differences due to different netting rules, other than those already included in row 2	-	-	-	-	-
7	Differences due to consideration of provisions	-	-	-	-	-
8	Differences due to prudential filters	-	-	-	-	-
9	Exposure amounts considered for regulatory purposes	3,573,578	3,508,617	-	64,961	-

3.3 Main sources of differences between regulatory exposure amounts and carrying values in financial statements (LIA)

HBL UAE being a branch in UAE, the capital return and Pillar 3 disclosures are only done for the UAE branch without any consolidation involved.

The exposure amounts subject to capital framework are as per financial statements net of Provisions and Interest in suspense as detailed in LI1 and LI2.

Intangible assets, Deferred Tax Assets on unused tax losses (currently NIL for the Bank) and Deferred tax assets above certain thresholds (currently NIL for the Bank) are deducted from Capital and not considered under credit risk framework in accordance with the CBUAE Capital Adequacy Standards.

Certain on/off Balance sheet items are subject to more than one type of risk as specified in forms LI1 and LI2. Also, off balance sheet exposures are converted, by applying a credit conversion factor (CCF), into equivalent credit exposures in accordance with the CBUAE Capital Adequacy Standards.

The Credit equivalent amount for derivatives is computed based on the Standardized approach for Counterparty Credit Risk wherein the Bank calculates EAD separately for each netting set, as the sum of the Replacement Cost (RC) of the netting set plus the calculated Potential Future Exposure (PFE) for the netting set, with the sum of the two multiplied by a factor of 1.4 in accordance with the CBUAE Capital Adequacy Standards on Counterparty Credit Risk.

4. Geographical distribution of credit exposures used in the countercyclical buffer

AED '000

Geographical breakdown	Countercyclical capital buffer rate	Exposure values	Risk-weighted assets	Weighted average
France	1.00%	55,620	16,632	1%
South Africa	1.00%	54,865	27,433	2%
Spain	0.50%	18,554	9,277	1%
Others	0.00%	1,542,651	1,422,523	96%
Total private exposure		1,671,690	1,475,865	100%
Countercyclical buffer amount				0.03%

Based on Basel Committee on Banking Supervision.

5. Composition of Capital

5.1 Composition of regulatory capital (CC1)

The capital base of the Bank primarily consists of Head office assigned capital, accumulated reserves, general provisions net of capital deductions (intangibles, deferred tax assets).

31 December 2024		AED '000	
		a	b
		Amounts	CC2 reference
	Common Equity Tier 1 capital: instruments and reserves		
1	Directly issued qualifying common share (and equivalent for non-joint stock companies) capital plus related stock surplus	-	
2	Retained earnings	(59,045)	
3	Accumulated other comprehensive income (and other reserves)	14,990	
4	<i>Directly issued capital subject to phase-out from CET1 (only applicable to non-joint stock companies)</i>	-	
5	Common share capital issued by third parties (amount allowed in group CET1)	373,072	(a)
6	Common Equity Tier 1 capital before regulatory deductions	329,017	
	Common Equity Tier 1 capital regulatory adjustments		
7	Prudent valuation adjustments	-	
8	Goodwill (net of related tax liability)	-	
9	Other intangibles including mortgage servicing rights (net of related tax liability)	1,836	(b)
10	Deferred tax assets that rely on future profitability, excluding those arising from temporary differences (net of related tax liability)	-	(c)
11	Cash flow hedge reserve	-	
12	Securitisation gain on sale	-	
13	Gains and losses due to changes in own credit risk on fair valued liabilities	-	
14	Defined benefit pension fund net assets	-	
15	Investments in own shares (if not already subtracted from paid-in capital on reported balance sheet)	-	
16	Reciprocal cross-holdings in CET1, AT1, Tier 2	-	
17	Investments in the capital of banking, financial and insurance entities that are outside the scope of regulatory consolidation, where the bank does not own more than 10% of the issued share capital (amount above 10% threshold)	-	
18	Significant investments in the common stock of banking, financial and insurance entities that are outside the scope of regulatory consolidation (amount above 10% threshold)	-	
19	Deferred tax assets arising from temporary differences (amount above 10% threshold, net of related tax liability)	-	
20	Amount exceeding 15% threshold	-	
21	Of which: significant investments in the common stock of financials	-	
22	Of which: deferred tax assets arising from temporary differences	-

26	CBUAE minimum leverage ratio requirement	3.00%	3.00%
27	Applicable leverage buffers	-	-

7. Liquidity

7.1 Liquidity Risk Management (LR1)

Liquidity risk is the risk that the Bank may be unable to meet its cash obligations as they become due, or to fund assets at a reasonable cost due to the inability to liquidate assets or to obtain adequate funding. Liquidity risk can be caused by market disruptions or credit downgrades which may cause certain sources of funding to diminish.

Measurement of Liquidity Risk

The Bank follows a comprehensive liquidity risk management policy duly approved by the Board. The policy provides necessary guidelines for establishing a robust liquidity risk management framework which helps in identifying the key liquidity and funding risks to which the bank is exposed, describes how these risks are identified, measured, monitored and reported, and prescribes the techniques and resources used to manage and mitigate these risks. The policy stipulates maintenance of various ratios, funding preferences, and evaluation of the Bank's liquidity under normal and crisis situations (stress testing). The Bank also has a Contingency Funding Plan in place to address liquidity issues in times of crisis. This plan identifies early warning indicators to preempt unforeseen liquidity crisis. Triggers are used to ascertain potential stress scenarios.

The Bank's ALCO is responsible for the formulation of overall strategy and oversight of asset and liability management. Liquidity Risk is monitored using a range of metrics, including Eligible Liquid Assets Ratio (ELAR) and Lending to Stables Resource Ratio (LSRR); liquidity gaps and various liquidity ratios are regularly monitored by Risk Management. Liquidity risk is also reviewed by ALCO and Global ALCO Sub-Committee for Market & Liquidity Risk-Head Office on a monthly basis.

The bank uses a variety of ratios/tools to quantify liquidity risk. HBL Management monitors the same for trends and impact analysis. In addition to monitoring of the liquidity gap on monthly basis, the key ratios used by the Bank for measuring liquidity risk are Eligible liquid asset ratio and the Lending to stable resources ratio (regulatory ratio's) which stood at 40.55% and 54.63% respectively as of 31st December 2024.

Additionally, the Bank uses the following ratios on a continuous basis for measuring liquidity risk, these measures are monitored internally and reported to respective committees.

- Advances to Deposit Ratio (ADR)
- Concentration Ratio (large deposit ratio)
- Liquidity Coverage Ratio (LCR)

Contingency Funding Plan & Recovery Plan

The Contingency Funding Plan (CFP) is a projection of future cash flows and funding sources of the bank under a crisis. As part of liquidity management and measurement the Treasury function in collaboration with Risk Management prepares the CFP and reviews it on a periodic basis (at least annually) to identify the stress scenarios and the funding plan for such scenarios to ensure readiness for stress situation.

The Bank has also in place a recovery plan which defines the measures, options and processes related to conservation and generation of liquidity and capital in times of financial distress. It also provides a well-defined governance structure and mechanism to ensure that proactive monitoring is in place which timely highlights the deviations & exceptions in recovery indicators.

7.2 Eligible Liquidity Asset Ratio (ELAR)

The following table presents the breakdown of the Bank's available high-quality liquid assets (HQLA), as measured and defined according to the CBUAE Liquidity Regulations.

AED '000			
1	High Quality Liquid Assets	Nominal amount	Eligible Liquid Asset
1.1	Physical cash in hand at the bank + balances with the CBUAE	405,865	
1.2	UAE Federal Government Bonds and Sukuks	537,548	
	Sub Total (1.1 to 1.2)	943,413	943,413
1.3	UAE local governments publicly traded debt securities	53,986	
1.4	UAE Public sector publicly traded debt securities	-	
	Sub total (1.3 to 1.4)	53,986	53,986
1.5	Foreign Sovereign debt instruments or instruments issued by their respective central banks	-	-
1.6	Total	997,399	997,399
2	Total liabilities		2,917,949
3	Eligible Liquid Assets Ratio (ELAR)		34.18%

The above represents simple average of 3 monthly ELAR returns as submitted to CBUAE in Q4'24.

7.3 Advances to Stable Resources Ratio (ASRR)

The following table presents the breakdown of the Bank's Advances to Stable Resources Ratio (ASRR), as per the CBUAE Liquidity Regulations.

AED '000			
	Items	Amount	
1	Computation of Advances		
1.1	Net Lending (gross loans - specific and collective provisions + interest in suspense)	418,831	
1.2	Lending to non-banking financial institutions	-	
1.3	Net Financial Guarantees & Stand-by LC (issued - received)	2,194	
1.4	Interbank Placements	1,015,719	
1.5	Total Advances	1,436,744	
2	Calculation of Net Stable Ressources		
2.1	Total capital + general provisions	363,065	
	Deduct:		
2.1.1	Goodwill and other intangible assets	-	
2.1.2	Fixed Assets	11,335	
2.1.3	Funds allocated to branches abroad	-	
2.1.5	Unquoted Investments	-	
2.1.6	Investment in subsidiaries, associates and affiliates	-	
2.1.7	Total deduction	11,335	
2.2	Net Free Capital Funds	351,730	
2.3	Other stable resources:		
2.3.1	Funds from the head office	3,104	
2.3.2	Interbank deposits with remaining life of more than 6 months	-	
2.3.3	Refinancing of Housing Loans	-	
2.3.4	Borrowing from non-Banking Financial Institutions	47,514	
2.3.5	Customer Deposits	2,363,092	
2.3.6	Capital market funding/ term borrowings maturing after 6 months from reporting date	-	
2.3.7	Total other stable resources	2,413,710	
2.4	Total Stable Resources (2.2+2.3.7)	2,765,440	
3	Advances TO STABLE RESOURCES RATIO (1.6/ 2.4*100)	51.95%	

The above represents simple average of 3 monthly ASRR returns as submitted to CBUAE in Q4'24.

8. Credit Risk

8.1 General qualitative information about credit risk (CRA)

Credit risk is defined as the risk of loss of principal or loss of a financial reward stemming from a borrower's failure to repay a loan or otherwise meet a contractual obligation. Credit risk arises from the bank's dealings with individuals, businesses, financial institutions, sovereigns etc. While loans are the largest and most obvious source of credit risk; it also stems from activities both on and off-balance sheet. In the Bank's portfolio, losses stem from outright default due to inability or unwillingness of a customer or counterparty to meet commitments in relation to lending, trading, settlement, and other financial transactions. Alternatively, losses may result from reduction in the portfolio value due to actual or perceived deterioration in credit quality.

Credit Policy of the bank identifies the sources of credit risk in the bank's business operations in terms of business areas, product types, collateral etc. Credit Risk carries out the following main activities pertaining to credit risk management:

- Formulation of credit risk framework comprising policies, procedures, methodologies, tools and MIS etc.
- Credit Approvals as per CAA
- Management of implementation of tools for measuring credit risk (ORR, etc.) and systems

CBUAE Credit Risk Management Regulation and Standards

Central Bank of UAE issued Credit Risk Management Regulation and Standards in November 2024. Subsequently, the bank conducted a comprehensive review and gap analysis of the documents and accordingly, the changes required were incorporated in the Global Credit Policy and procedures of the bank. Compliance status along with the timelines for full compliance of three partially compliant gaps were submitted to Central Bank of UAE on March 26, 2025.

Measurement of Credit Risk

The risk identification process starts at the credit origination stage based on the underwriting rules and guidelines defined in the Credit Policy. Detailed analysis is carried out for all credit proposals originating from business functions including assessment of credit risk of the customers covering aspects such as their business operations, financials, regulatory environment, macro-economic factors etc.

The tools used at this stage are the internal Obligor Risk Rating (ORR) framework, risk appetite approved for credit risk and regulatory requirement for large exposure and any other regulatory requirement, as applicable.

Based on a comprehensive reporting framework, continuous monitoring of the credit portfolio and the risks attached thereto is carried out at different levels including businesses, BRR, CAD, Risk and HOK.

The monitoring mechanism includes large exposure (Per Party), Past Due Obligation Statements, Early Warning Mechanism, Classification and Provisioning on a regular basis.

Obligor Risk Rating (ORR) Framework

The Bank has an obligor credit rating framework for borrowers. Internal Obligor Risk Rating is also being performed for externally non-rated financial institution customers.

The obligor ratings are assigned at the time of credit initiation and then reviewed on an annual basis. An interim review is carried out in case there is any material adverse change in the industry or borrower's business. A higher review frequency may be followed for borrowers on watch list or considered high-risk.

While the originating unit proposes a credit rating, the final decision on the risk rating of a particular customer rests with Credit Risk Management function. Credit Risk Management based on its credit

judgment based on including but not limited to industry and/or customer outlook or on the basis of recommendation by Business Unit (with proper justification) can assign an ORR different than the derived ORR. Original approval authority (within Credit Risk Management) can approve upgrade of derived ORR by 1 notch. Two (2) or more notches upgrade can only be approved by CRO or the President in HBL Head office (Pakistan). The ratings only become effective once approved by Credit Risk Management.

Business Risk Review (BRR) reviews and validates these ratings periodically as part of their Credit Review process. For definition of default please refer note 2.3(d) of annual financial statements.

9. Market Risk

9.1 General qualitative disclosure requirements related to market risk (MRA)

Market Risk is the risk that the value of positions of a financial institution will be adversely affected by movements in market rates or prices such as interest rates, foreign exchange rates, equity prices, credit spreads and/or commodity prices resulting in a loss to the earnings and capital.

The Bank manages its market risk exposure arising due to volatility in market driven variable, such as foreign exchange rates. The Bank uses mark-to-market to assess securities and FX portfolio on daily basis.

HBL-UAE does not invest in trading portfolio therefore the Bank's portfolio comprises of instruments which are not held with trading intent and include financial investment in debt instruments measured at fair value through other comprehensive income.

The Bank's exposure to market risk is governed by a policy approved by the Board. The policy helps in institutionalizing market risk identification, measurement, monitoring and reporting. The Bank has also in place Board approved risk appetite thresholds. Limits and market risk exposures are reviewed by ALCO, ALCO Sub-Committee for Market & Liquidity Risk – Head Office and Integrated Risk Management Committee (IRMC) at regular intervals.

HBLUAE has a dedicated resource to monitor the market risk profile of the Bank. Breaches of limit is reported and escalated to the Senior Management as and where deemed required.

Measurement of Market Risk

The Bank has separate and clear definitions of trading and investment books. Currently all activities of HBL UAE fall into the Investment/ Banking Book classification.

Trading activities are generally restricted to Foreign Exchange and are executed in the market based on the underlying client activities. This is controlled through Net Open Position (NOP) Limit, duly assigned by HBL- Head Office and is monitored at regular intervals. In addition, bank's assets that are funded by liabilities in different currencies are funded through short duration swaps, eliminating the currency risk on the same.

Market Risk Management provides a dynamic and proactive approach to market risk monitoring, including the use of tools such as Value at Risk, Earnings at Risk, stress testing and the use of Limits.

9.2 Market risk under the standardised approach (MR1)

The following table provides the components of capital requirement under the standardized approach for market risk:

		AED '000

10. Interest Rate Risk in the banking book (IRRBB)

10.1 IRRBB risk management objectives and policies (IRRBBA)

Interest Rate Risk in Banking Book refers to the risk of loss in earnings or economic value of the Bank's Banking book because of movement in interest rate. The Bank analyze its profit rate risk in banking books in line with the following categories.

- **Re-pricing risk:** this risk refers to the loss in the earnings or economic value due to the changes in the overall level of interest rates. This risk arises due to the mismatch in the re-pricing dates of the Banking book assets and liabilities.
- **Yield curve risk:** this risk refers to the loss in earnings and economic value of the book caused by the change in the relative levels of interest rate of different tenors. This risk also arises due to the mismatch in the re-pricing of the Banking book assets and liabilities.
- **Repricing gap:** The bank monitors repricing gap on monthly basis and the same is also presented and discussed as part of ALCO monitoring. The Bank's gap is used in obtaining the difference between rate sensitive assets and rate sensitive liabilities, which is used to obtain the interest rate risk impact. NII is being assessed as part of this assessment.
- **Economic value approach:** this approach is used to analyze the dynamic behavior of economic value of equity with response to varying interest rate shock. Economic value of asset and economic value of liability is assessed to determine the next impact on economic value of equity due to change in interest rate risk.

Interest Rate Risk on Banking Book arises due to the mismatch in maturity or repricing of assets and liabilities. Banking Book is defined as the bank's structural position and includes all positions (assets and liabilities) excluding trading portfolio. Interest Rate Risk in Banking Book (IRRBB) refers to the risk of loss in earnings or economic value of the Bank's Banking Book as a consequence of movement in interest rates. Rate Sensitive Gap is a tool used to assess a bank's exposure to interest rate movement. The Bank uses Earning at Risk and Economic Value of Equity to measure and monitor the interest rate risk at regular intervals to ensure that necessary action can be taken as and where deemed required.

Measurement of Interest Rate Risk in Banking Book

The Bank uses the following tools for measuring and monitoring interest rate risk in the banking book. The analysis is performed at least on a monthly basis. The analysis helps in estimating and managing the impact of interest rate volatility on the Bank's earnings and on the economic value of equity within the regulatory threshold.

Economic Value of Equity (EVE)

Variation in market interest rates can affect the economic value of a bank's assets and liabilities. The Bank has adopted the IRRBB guidelines and six shock scenarios are considered to determine the impact. Six shocks scenarios are as follows:

- a. Parallel shock up (+200bps)
- b. Parallel shock down (-200bps)
- c. Steepening of curve / shock (short rates down and long rate up)
- d. Flattening of curve/ shock (short rates up and long rates down)
- e. Short rates shock up
- f. Short rates shock down

This approach analyzes the dynamic behavior of economic value of equity with response to varying interest rate scenarios.

Earnings-at-Risk (EAR)

EAR measure is used to identify the impact of changes in net interest rate over a specified period of time. This is the traditional approach to interest rate risk in the Banking Book.

The Board has setup the limit based on the impact of a basis points change in interest rates to the earnings of the bank over a one-year horizon.

10.2 Repricing maturity assigned to non-maturity deposits (NMD) (IRRBBA1)

- Average repricing maturity assigned to NMDs is 2.83 years
- Longest repricing maturity assigned to NMDs is 7.5 years.

10.3 Quantitative information on IRRBB (IRRBB1)

In reporting currency (AED '000)	Δ EVE	Δ NII
Period		
Parallel up	(2,674)	6,578
Parallel down	1,657	(6,578)
Steepener	5,528	
Flattener	(6,053)	
Short rate up	(15,467)	
Short rate down	15,687	
Maximum	(15,467)	
Tier 1 capital	329,143	

11. Operational Risk

11.1 General qualitative information on a bank's operational risk

The Basel committee defines Operational risk as 'the risk of loss resulting from inadequate or failed internal processes, people and systems or from external events. The Bank has also adopted the same definition in line with Basel committee and CBUAE requirement. Operational Risks may arise out of employee, customer or third-party frauds, natural disasters, technology failures, process breakdowns, unethical business practices etc. Operational risk is an integral part of any business or activity. All organizations (including banks) assume operational risk and try to manage it in one form or the other. Banks have the potential of facing huge losses arising from operational risk due to their nature of business. Operational risk spans across the whole bank. The Bank has adopted 'Sound Practices for the Management and Supervision of Operational Risk' and Basel Operational risk guideline which supports the Bank and strengthen Operational Risk Management processes and complies with CBUAE Operational Risk Management guideline.

Measurement of Operational Risk

Operational Risk Management is housed within Risk Management and a comprehensive Operational Risk Management (ORM) Framework is in place which addresses all the significant aspects of ORM i.e. people, processes, systems and external events. The Bank has adopted operational risk tools which include loss data management, development and testing of Integrated Risk and Control Repository (IRCR) and Key Risk Indicators (KRIs). Operational Risk Coordinators have been assigned from all relevant departments of the Bank and are responsible for implementation of the Framework in coordination with the Risk Management department. The Bank uses the Basic Indicator Approach (BIA) under Basel to determine capital requirement pertaining to Operational risk. Key ORM tools such as Risk Control Self-Assessment (RCSA)/ Integrated Risk and Control Repository (IRCR), KRIs and Operational Loss Data are used to gauge the likelihood and severity of operational risk. The Bank uses stress testing for proactive impact assessment pertaining to Operational loss. The bank has also developed Integrated Risk and Control Repositories covering all functions of the bank and testing of controls is conducted at regular intervals across the Bank. Operational risk reports are regularly submitted to the senior management at HBL.

The total capital requirement for Operational Risk as at 31 December 2024 is AED 24.6 million.

12. Remuneration Policy

12.1 Remuneration Policy (REMA)

Introduction

The remuneration policy for HBLUAE (the “Bank”) is consistent with the approach for Habib Bank Limited (the “Group”) and is aligned with the remuneration regulations in the UAE and in the Pakistan where the Group is headquartered.

HBL Management is committed to provide a total compensation package that enables the Bank to attract and retain highly skilled, talented and motivated employees for all positions. Our goal is three-fold:

- To compete for qualified staff in an evolving environment,
- To pay employees equitably and fairly
- To be fiscally responsible

Additionally, Risk aligned remuneration methodology exists to evaluate and reward employees whilst enhancing individual accountability and mitigate risks associated with the decisions undertaken based on the job assigned. In UAE, we ensure that bank’s remuneration policies, standards and practices are aligned to the Corporate Governance Regulations and Standards of the Central Bank of the UAE.

Board Human Resources & Remuneration Committee (BHR&RC) has the responsibility for setting the remuneration policy principles, overseeing implementation of the remuneration policy and overseeing the remuneration of all employees.

Disclosures

The qualitative disclosures in relation to the Bank’s remuneration policy are set out below in accordance with the template issued by the Central Bank of the UAE.

A. Information relating to the bodies that oversee remuneration		
A1	Name of the Board	As there is no Board in UAE, oversight of the Bank’s remuneration policy is therefore provided by Board Human Resources & Remuneration Committee (BHR&RC), which is a Board level committee of the Group.
A2	Composition of the Board	The committee comprises of 3 members including Chairman appointed by the Board. Members are non-executive directors preferably independent directors. The Committee is supported by Functional Head, Human Resources.
A3	Mandate of the Board	The BHR&RC has independent oversight and control to review and recommend HR policies and strategies to be approved by the Board including policies related to remuneration and reward practices as well as career & developmental plans.
A4	Scope of the Bank’s remuneration policy, including the extent to which it is applicable to foreign subsidiaries and branches	<p>The Group’s remuneration policy applies globally, across all branches and subsidiaries.</p> <p>In some instances, local variations to Group policies do exist. However, where this happens, HBL always aims to align with the local regulations.</p>
A5	Types of employees considered as Material Risk Takers and Senior Managers	The Risk Aligned Remuneration framework identifies employees who are either responsible for material risk taking or risk controlling activities within the Bank based on the defined qualitative and quantitative criteria as approved by the Board. The criterion applied identifies employees as either 'Material Risk Takers' (MRTs) or 'Material Risk Controllers' (MRCs) based on the job position, role, decision making authority and Scope / portfolio of responsibility.

B. Information relating to the design and structure of remuneration processes		
B1	Overview of the key features and objectives of remuneration policy	<p>The remuneration policy provides guidance over remuneration approach, decisions and governance.</p> <p>Overall, remuneration policy is designed to:</p> <ul style="list-style-type: none"> ▪ Reward performers over the long-term, whilst avoiding excessive and unnecessary risk-taking, and ▪ Promote sound and effective risk management through remuneration structures <p>Additionally, in order to support the attraction, retention and motivation of a diverse, future-ready workforce to deliver on our purpose, long-term strategy and shareholder returns, BHR&RC sets out the principles we use to make remuneration decisions that are fair, transparent and competitive in order to support us in embedding a performance-oriented, inclusive and innovative culture and in delivering a differentiated employee experience.</p>
B2	Review of Remuneration Policy	There were no changes made to the remuneration policy during the past year by the Board HR&RC.
B3	Remuneration of Risk and Compliance Employees	<p>The fixed remuneration of employees in Control Functions (including Compliance, Internal Audit and Risk) reflects the skills and experience of each individual and is reviewed annually, considering market information, the individual's performance and affordability.</p> <p>Reporting hierarchy and compensation decisions of control functions are independent of the UAE business and managed directly by Head Office in Pakistan.</p> <p>The methodology ensures that employees in Control Functions are remunerated in accordance with the achievement of objectives linked to their functions.</p> <p>Overall, the remuneration approach and structure of employees in Control Functions is in line with market practice to attract and retain talent.</p>

C. Ways in which current and future risks are taken into account in the remuneration processes		
C1	Overview of the key risks	<p>The remuneration approach is designed to promote sound risk management by aligning employee incentives with the longer-term interests of the Bank, taking into account the timeframe over which financial risks crystallize. Good conduct and the demonstration of appropriate behaviors are rewarded. General risk and control issues include Technology risk, Operational Risk, data privacy and data sovereignty issues, and risk management culture.</p>
C2	Measurement of risks and impact on Remuneration	<p>To implement a risk aligned remuneration framework in a transparent manner, risk adjusted performance scorecards have been defined for each MRT & MRC that assists not only in tracking performance accomplishments but also for managing risks associated with performance decisions.</p>

		<p>The methodology for payment of variable performance bonus has also been aligned to enhance accountability based on performance and the time horizon of risks associated with the decisions. Below are some of the key features of risk aligned remuneration policy:</p> <ul style="list-style-type: none"> - 30% of the annual performance bonus will be deferred for a period of three subsequent years to be paid proportionally on annual basis i.e. 33% of deferred bonus to be paid on annual basis. - The deferral methodology is implemented for employees at General Manager level or those classified as MRTs/MRCs. <p>Clawback and Malus has also been made part of the policy guidelines whereby in case of any adverse risk incident attributable to the employee may negatively impact the performance bonus deferred or earned depending on the materiality and severity of the incident.</p>
--	--	--

D. Ways in which the bank seeks to link performance during a performance measurement period with levels of remuneration		
D1	Overview of main performance metrics for bank, top-level business lines and individuals	<p>At HBL UAE level, balanced scorecards play an integral role in evaluating the performance that determines the discretionary variable remuneration. The scorecards take into consideration financial and non-financial targets, including those related to conduct and remediation programs. This incentivizes improvements in shareholder returns whilst ensuring that returns are not generated by excessive risk-taking. Measures in the scorecards are determined in alignment with the Bank's strategy.</p> <p>At an individual level, we have a clearly defined performance management framework where employees have objectives aligned with our strategy.</p>
D2	Linking Individual Remuneration with Bank-wide and Individual Performance	<p>The overall remuneration decisions are made on the basis of Bank wide accomplishments and are approved by the Board, HR&RC for implementation.</p> <p>In line with our Pay for Performance philosophy, the annual revision in remuneration & variable reward is directly linked to the overall Banks and Units performance as well as individual performance accomplishment, employee's grade and their compensation positioning in comparison to others in that grade.</p>
D3	Measures to adjust Remuneration in the event of weak Performance Metrics	<p>The Bank has a performance measurement system which rates every employee on a scale of 1 to 5 (where 1 being the lowest and 5 being the highest) based on their performance accomplishments. The annual remuneration decisions are made based on the performance ranking of each employee as well as unit and Bank wide performance.</p> <p>Furthermore, the performance for MRTs and MRCs is negatively impacted, whereby in case of any adverse risk incident attributable to the employee may negatively impact</p>

		the performance bonus deferred or earned depending on the materiality and severity of the incident.
--	--	---

E. Ways in which the bank seeks to adjust remuneration to take account of longer-term performance		
E1	Bank's policy on deferral and vesting of variable remuneration	<p>As per Bank's policy, employee's compensation & reward structure is linked not only to his/her individual performance but also with the overall performance of the Bank. Risk Aligned Remuneration policy further enhances accountability by identifying material risk takers and material risk controllers in the Bank. Furthermore, based on the policy guidelines, a portion of the variable pay of all General Managers and for MRTs/ MRCs would be deferred for a period of 3 years to be vested equally on annual basis.</p> <p>Clawback and Malus has also been made part of the policy guidelines whereby in case of any adverse risk incident attributable to the employee may negatively impact the performance bonus deferred or earned depending on the materiality and severity of the incident.</p>

F. Different forms of variable remuneration that the bank utilizes and the rationale for using these different forms		
F1	Different forms of variable Remuneration	The Bank currently employs the concept of variable pay in the form of performance bonus which is paid out as a cash reward.

12.2 Remuneration awarded during the financial year (REM1)

			AED '000
	Remuneration Amount		Senior Management
